PROFILE

Software engineer with internship experience at Ecobank and TotalEnergies, building across the stack — Spring Boot and NestJS APIs on MySQL, React and React Native on the front end, Docker and Git for delivery. On my own time I build systems software: a Java limit order-book matching engine benchmarking at ~1.4M orders/sec, an x86-64 kernel in Rust, and an ERC-721 land registry. Now moving into AI engineering with the Anthropic and OpenAI APIs, LangChain, and Claude Code.

EXPERIENCE

Ecobank Transnational Incorporated — Software Engineering Intern (Backend)

Jul – Oct 2024 · Lagos

- Built and maintained RESTful APIs in Java and Spring Boot, handling high volumes of requests in a regulated banking environment.
- Designed a normalized MySQL schema for core product features, cutting query complexity and protecting data integrity.
- Optimized slow database queries and measurably reduced response latency.
- Agreed API contracts with front-end developers, clearing integration blockers and speeding up delivery.
- Debugged and fixed production issues in a live, customer-facing system.

Bazara Tech — Product Intern

Jul – Sep 2025 · Nigeria

- Tested and debugged APIs across several product features, catching issues early and contributing to more stable releases.
- Wrote technical documentation for APIs and internal processes, reducing onboarding friction for new contributors.
- Sat in daily scrums across the full product cycle in a fast-moving B2B team — scoping, sprint planning, QA, and release.

Ecobank Transnational Incorporated — Software Engineering Intern (Frontend)

Aug – Sep 2023 · Lagos

- Developed responsive web and mobile banking features in React and React Native on a platform serving 1M+ active users.
- Built and deployed a containerized backend with NestJS and Docker, improving data availability and developer throughput.
- Wrote automated regression tests with React Component Testing, cutting manual QA effort and improving release reliability.

TotalEnergies — IT Intern

Aug – Sep 2022 · Lagos

- Managed the IT ticketing system, resolving hardware and software incidents to keep operations running without downtime.
- Ran IT asset inventory and lifecycle tracking for 50+ devices, improving allocation accuracy and audit compliance.

SELECTED PROJECTS

- **Matching Engine — Limit Order Book** (Java 21)
Strict price-time priority, integer-tick pricing and O(1) cancel; a benchmark harness clocks it at ~1.4M orders/sec. Built for latency and correctness under load.
- **LandChain — Blockchain Property Registry** (Solidity, React)
ERC-721 land titles with a two-gate security layer (3-of-3 multi-signature quorum + biometric identity hash) and off-chain IPFS storage, producing immutable ownership records and an audit trail.
- **AfaraAI — AI Cultural Heritage Platform** (Winner, Google AI4Culture Hackathon)
Co-developed AI models for artifact recognition and translation of low-resource African languages; owned the pitch and demo that won the hackathon.
- **Rust Kernel & Bootloader** (Rust, x86-64)
A freestanding x86-64 kernel on the bootloader_api crate with hardware interrupt handling and a framebuffer text writer — boots on bare metal with no standard library.

- **Front-End Showcase — Aurora, MONOLITH, Atelier Vesper** (HTML, CSS, JS)

Three hand-built interactive sites: canvas gradient-mesh rendering, a live editable type specimen, and orchestrated scroll reveals. No libraries, no build step.

TECHNICAL SKILLS

Backend: Java (Spring Boot), Node.js, NestJS, Python, RESTful API design

AI & Emerging Tech: Anthropic API, Claude Code, Model Context Protocol, OpenAI API, LangChain, applied ML, Solidity

Frontend: TypeScript, ReactJS, React Native, Tailwind CSS, HTML, CSS, JS

Systems & Languages: Rust, C++, low-level systems programming

Databases & Tools: MySQL, PostgreSQL, SQL, Docker, Git, Postman

CERTIFICATIONS

- **Anthropic — Claude Code Certification (2026):** agentic software development — MCP servers, hooks, automation, and multi-step engineering workflows.
- **Anthropic — Claude 101 (2026):** foundations of building with Claude — effective prompting and practical LLM workflows.
- **BCG / Forage — Digital Transformation Job Simulation (Jul 2026):** built an app concept for client CoffeeCo to combat declining sales — researched F&B customer-engagement trends, analyzed pain-point data to prioritize the problem to solve, and set up an agile plan in Trello.

EDUCATION & AWARDS

Pan-Atlantic University — B.Sc. Computer Science

Oct 2022 – Dec 2026 · Lagos

Coursework: Data Structures & Algorithms, Artificial Intelligence, Database Management, Principles of Software

Engineering, Systems Analysis & Design, Compiler Construction, Digital Logic Design. Prior: Loyola Jesuit College, Abuja.

- Winner, Google AI4Culture Hackathon (Centenary Project Incentive).
- 2nd Place, TIC Hackathon — MSME financial-inclusion platform with cashflow tracking and automated credit scoring.
- 5th Place, 2025 GBSN Africa Business Concept Challenge.
- Organizer, peer-to-peer tutoring program, Pan-Atlantic University (2024–present).
